San Mateo, CA

Education

- B.S. in Computer Science from University of California - Irvine *Graduated*

Professional Experience

Software Engineer at Career Development, San Mateo, CA

Sept 2023 to Present

- Built a project management application using HTML, CSS, JavaScript, TypeScript, Node.js with Express, and Cursor, enabling teams to track work through Kanban workflows and agile sprints.
- Created a comment summarization feature using Gemini AI and Prompt Engineering, eliminating the need to manually parse long discussion threads on project tickets.
- Built REST API endpoints in Node.js with Express and PostgreSQL to manage user permissions and approval flows, ensuring proper access control.
- Created analytics dashboards using React, Redux and Recharts to display sprint velocity and task distribution, allowing managers to identify potential bottlenecks and distribute workloads evenly.

Software Engineer at Rhumbix, San Francisco, CA

Oct 2021 to Jun 2023

- Built web and mobile interfaces for construction management software using HTML, CSS, JavaScript, TypeScript and Python, reducing manual data entry for contractors and subcontractors.
- Designed a mobile feature using React Native and AWS S3 to enable file submissions without internet access, satisfying a critical feature request from one of the company's largest clients.
- Built an interactive spreadsheet interface using React, AG Grid, TypeScript, Django and PostgreSQL to manage user API keys, enforcing access control and preventing API misuse.
- Supported CI/CD pipeline by implementing feature-flagged releases using LaunchDarkly and troubleshooting build failures in Travis CI, improving deployment safety and release reliability.

Software Engineer at Home Campus, Costa Mesa, CA

July 2018 to Sept 2021

- Rebuilt the core high school athletics registration platform using HTML, CSS, Vue.js, PHP, Laravel and MySQL to streamline student athletics registration and administrative approval workflows.
- Migrated legacy mobile apps to a progressive web application (PWA) model using Ionic and Angular, eliminating the need for separate codebases and reducing maintenance overhead.
- Reduced server costs and maintenance burden by migrating file uploads to AWS S3, and authored technical documentation using Markdown, Git and GitLab, ensuring a standardized setup process for future developers.
